About mySoftware

mySoftware provides electronic engineering services to Israeli industry.

Reverse Engineering - If your old, custom made PCB has failed and its critical to your production, you may consider refurbishment.

No data is needed - No documentation, schematics or even manufacturer name, makes it impossible to be repaired? Not for us. By utilising our extensive knowledge and making use of our sophisticated hi-tech equipment and technology, we are able to remanufacture your board to its original functionality.

Refurbishment service - For the same price you can get a better than new card rather than just fixing it.

Refurbishment an electronic PCB consistant adding/incorporating the latest and most updated components and technology to your board.

cost effective solution to increase life cycle and reliability of your board.

Electronic Obsolete Services - mySoftware specialized in obsolete services for electronic components and obsolete parts around the glob. If you are looking for a distributor with a high reputation for quality products and service, you are in the right place.
